

Prompt	one task-agnostic API spec	→	four variants, C1 to C4
Generator π	Codex code-davinci-002	→	Qwen2.5-Coder, three sizes
Pipeline	single process, producer-consumer	→	two stages split at programs.jsonl
Depth API	compute_depth() → one scalar	→	depth_order, is_behind, distance_3d, ...
Depth backend	MiDaS, output used as returned	→	MiDaS, sign corrected and resampled
verify_property	X-VLM	→	CLIP ViT-L
simple_query / llm_query	BLIP-2-XXL / GPT-3	→	neutral fallback, out of scope
GLIP build	torch 1.13, CUDA 11.6	→	torch 2.1.2, CUDA 12.1, sm_90
Detection threshold	0.5	→	0.2, validated held out
Scoring	mean IoU; missing → mean box	→	acc@0.5 and mean IoU; missing → 0
Validation	seeds not stated	→	12 deviations, 3 seeds, 2 controls

Unchanged: the method itself — query → program → execute — the executor semantics, GLIP as detector, and the task.
